

Meta Ad Performance Analysis

Project Explanation in Interview

Step 1: High-Level Overview

This is a Meta Ad Performance Dashboard that tracks the effectiveness of ad campaigns using key KPIs such as impressions, clicks, engagements, conversions, and budget. It provides a complete funnel view from awareness and engagement to purchases, along with demographic, geographic, and time-based insights.

Step 2: Funnel Metrics

The ads generated **216K impressions** and **25.4K clicks**, resulting in a **CTR of 11.76%**. The engagement rate was **13.56%**, showing strong user interaction. However, only **1.3K purchases** were made, with a **5.21% conversion rate from clicks** and a **0.61% purchase rate from impressions**. This shows a significant drop from engagement to purchase.

Key takeaway: The ads are effective at generating awareness and engagement, but the purchase funnel has a major drop-off. Possible areas to investigate include the landing-page experience, audience mismatch, and offers.

Step 3: Audience Analysis

Females show higher engagement (43%) than males (22%), and the **18–30 age group** drives the majority of interactions. This indicates that young females are a core audience.

Geographically, **India and Brazil** generate the highest engagement, while **Germany and the UK** may represent higher-value audiences. Campaigns should therefore be tailored differently for high-volume and high-value regions.

Step 4: Time & Seasonality

Engagement peaks during the **afternoon and evening**, suggesting that ad scheduling and budget allocation should focus on these periods. Engagement spikes on the **19th–21st and 25th–27th** may be associated with promotions or campaign launches, indicating that event-based campaigns can improve performance.

Step 5: Ad Type Performance

Video ads perform best, with the highest CTR, conversion rate, and engagement rate. **Stories ads** also perform strongly, while image and carousel formats show slightly lower conversion efficiency. Budget can therefore be shifted toward video and stories.

Step 6: Key Insights & Recommendations

- 1 Strong awareness and engagement, but low purchase efficiency → optimize landing pages, retargeting, and offers.
- 2 Core audience: young females aged 18–30, especially in India and Brazil.
- 3 Best-performing formats: Video and Stories → consider increasing budget allocation.
- 4 Best-performing time: afternoons and evenings → schedule ads accordingly.
- 5 Geography: India/Brazil provide volume, while Germany/UK may provide higher-value audiences → segment strategies.

- 6 Focus on conversion optimization and retargeting to capture users who engage but do not purchase.
